DEXD™ DEXTROSE LOW CARB CHEWIES - LIFESAVERS

Stop the Roller Coaster: The Smarter Way to Treat Low Blood Sugar

We've all experienced the panic of a sudden "low." The shaking hands, the creeping brain fog, and the overwhelming urgency to get your numbers up—fast. For decades, the standard response to a hypoglycemic (hypo) event has been to grab whatever sugary snack is nearby: juice boxes, candy bars, or regular soda. But panic-treating with traditional sweets often leads to the dreaded "yo-yo" effect. You treat the low, your blood sugar violently spikes, and then it inevitably crashes again, leaving you battling mood swings, headaches, nausea, and deep fatigue for the rest of the day.

It's time to stop the cycle. The secret to stable recovery lies in a powerful, fast-acting ingredient: **Dextrose**.

The Science of Dextrose

To understand why traditional snacks fail to provide smooth recovery, you have to look at digestion. When you eat a candy bar or table sugar (sucrose), your digestive system has to break those complex molecules down before your body can use them. This delays your recovery.

Dextrose, on the other hand, is a simple sugar (a monosaccharide) that is chemically identical to the glucose your body naturally produces. Because its molecular structure matches blood sugar exactly, it requires virtually no digestion. It absorbs instantly and enters your bloodstream immediately. Endocrinologists and medical professionals widely regard dextrose as the gold standard for treating hypoglycemia because it provides the absolute fastest, most predictable blood sugar correction possible.

Enter DexD™ Dextrose Low Carb Chewies

Harnessing this rapid-acting science, we proudly introduce **DexD™ Dextrose Low Carb Chewies**. Professionally formulated as an essential, rapid-response intervention for anyone living with diabetes, DexD™ is engineered to stabilize your blood sugar levels effectively—without the crash.

By utilizing precise dextrose dosing, DexD™ ensures fast, reliable correction that sustains your stability long after the hypo event has passed.

Designed for Your Lifestyle

We know that managing diabetes requires both precision and convenience. That is why DexD™ was designed with your everyday

comfort in mind:

- **Precise Low-Carb Dosing:** Each chewy contains exactly 3 grams of fast-acting carbohydrates. This makes accurate dosing straightforward and removes the guesswork, which is especially helpful for those on low-carb management plans.
- **Rapid Melt Technology:** Formulated to dissolve quickly in the mouth, these chewies require minimal chewing. This highly soluble design makes them exceptionally safe and comfortable for young children, as well as individuals with braces or dental sensitivities.
- **Delicious Flavors:** Treating a low shouldn't taste like medicine. Enjoy four highly palatable flavors: Green Apple, Blackcurrant, Cream Soda, and Orange.
- **Always Ready:** Each travel-friendly tub contains 20 chewies, ensuring you have the exact dose you need right in your pocket, gym bag, or purse.

Take Control of Your Lows

Say goodbye to the blood sugar roller coaster and the exhausting symptoms of a post-treatment crash. Reclaim your peace of mind with fast, predictable, and sustained stability.

Ensure uninterrupted stability. Never leave home without DexD™.
